

Becoming Anonymous

Part I - Overview

@bugg

DISCLAIMER!!!

- This is not legal advice!
- This is a **FANTASY BACKDROP** for learning about Cybersecurity
- This has not been done IRL
- If you do this IRL you are committing a **CRIME!**

Series Overview

- Part I – Overview
- Part II – Intel
- Part III – Infrastructure
- Part IV – Recruiting
- Part V – Action

Overview of the Overview

- Solving real Cybersecurity problems can be boring
- There are many aspects to the cybers that don't make sense in a vacuum
- This series will use a **FICTIONAL** story to inspire solutions and explore options that you would otherwise not be exposed to

The Proposal

- You are a lame lonely hacker
- You see a clear goal that you want to achieve
- You need '*friends*' to achieve those goals
- You don't want to end up like anonymous

More Specifically

- Goal: Take down child-pornography sites
 1. Handover de-anonymizing information to the police
 2. Else, terminate the site
- Need: Know what you're doing
- Need: Group of hackers
- Need: Somewhere for them to work

Short History of Anonymous

- Originated on /b/
- Did a whole lot of DDoS-ing
- Completely de-centralized and chaotic
- Responsible for **lots** of damage
- **Dozens** of members have been arrested so far

#OpDarknet

A large, stylized graphic in the background. It features a globe with a question mark in the center. Overlaid on the globe is a black silhouette of a person wearing a suit and tie. The entire graphic is enclosed within a circular border.

- Anonymous went after Child-Pornography sites
- Started by removing links from the Hidden Wiki
- Then realized most of them had 1 hosting provider
- Threatened, then DDoS-ed that provider
- Hacked some stuff and published user info

#OpDarknet

- Unorganized
- Unprepared
- Long-Term Ineffective
- No actionable intelligence against the operator (short supply) just the users (large supply)

The DATDA Collective (TDC)
